

How to setup your Billion 8800NL Fibre Router

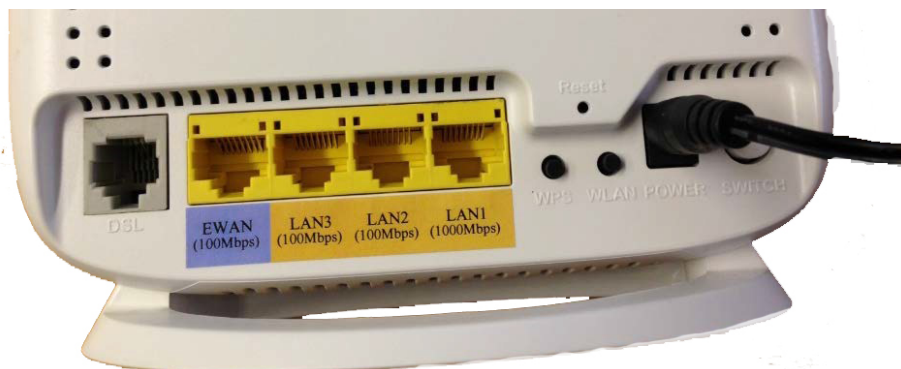

What is in the box:

- 1 Welcome letter including a setup guide
- 1 Router
- 1 Power Lead
- 1 Yellow Ethernet Lead
- 1 DSL Lead
- 2 Micro-filters

Procedure:

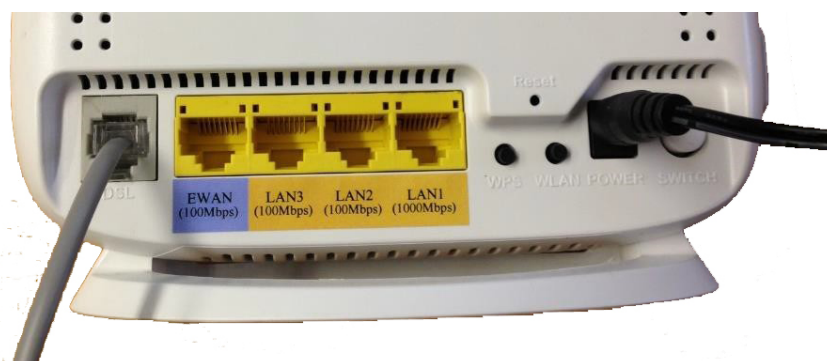

1. Firstly you need to take your router out of the box and connect the power lead, please do not turn it on until you have all other cables connected.

Please see image below:

2. You then need to connect your DSL Lead into the router.

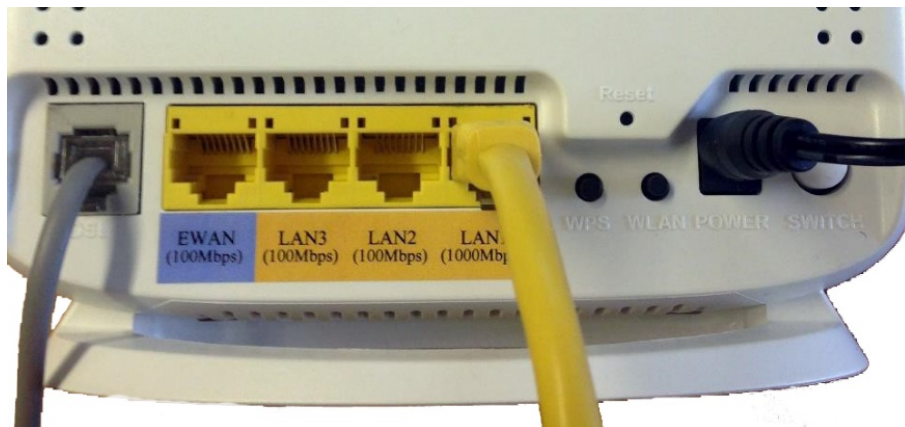

Please see image below:

3. You then need to connect the other end of the DSL Lead into the DSL socket labelled on the Micro-filter.
Please see image below:

4. If you wish to connect a device hardwired, you will need to use the Yellow Ethernet Lead provided with the router and connect it to one of the 4 LAN ports available.
Please see image below:

Please Note:

The blue Ethernet port labelled EWAN should not be used
It is recommended that for your main computer you use the main Ethernet port which is the one connected in the above screenshot and is labelled LAN1.
